

GlobalSign Digital Signatures for DocuSign

The easiest way to add legally accepted and publicly trusted digital signatures to mission-critical documents

With GlobalSign digital signatures for DocuSign, companies of all sizes can make the switch from slow, paper-ridden, manual agreement processes to a 100% digital solution. Now users can easily apply GlobalSign trusted signatures through DocuSign, the trusted digital document leader and Microsoft's preferred e-signature solution. The seamless, cloud-based service provides a true end-to-end signing experience and lowers barriers such as cost, hardware maintenance, and internal expertise.

Administer higher assurance, compliant digital signatures with no physical hardware to manage

GlobalSign is recognized by DocuSign as a Trust Service Provider (TSP). This means organizations using DocuSign can easily create digital signatures that will be automatically trusted within the platform and in Adobe programs such as Acrobat and DC Reader.

GlobalSign's cloud-based service handles all the cryptographic components needed to deploy trusted digital signatures (e.g., signing certificates, timestamping, key management, OCSP and CRL services) behind the scenes.

- Easily authenticate the identity of the signer, include embedded trusted timestamps, and create a tamper-evident seal on document contents
- Sign with employee or department-level identity
- Ensure robust security and compliance with regulatory standards including ISO 27001, SOC Type 2, SAFE BioPharma and PCI DSS

BENEFITS

- **THE SIMPLEST SIGNING EXPERIENCE FOR YOUR DIGITAL WORKFLOWS**
DocuSign streamlines the signing process with customizable workflows that integrate with the leading enterprise applications
- **PROVE SIGNER IDENTITY AND MEET COMPLIANCE WITH TRUSTED DIGITAL SIGNATURES**
Digital signatures with identity backed by a global Certificate Authority offer higher assurance than other types of electronic signatures and meet stricter regulatory compliance
- **SEAMLESS INTEGRATION MAKES IT EASY TO ADD DIGITAL SIGNATURES TO DOCUSIGN WORKFLOWS**
No hardware, PKI expertise, or development time needed

How It Works

1. Get a DocuSign account, if you don't already have one.

a. Contact your DocuSign Account Manager for your DocuSign API Account ID and have the Account Manager enable GlobalSign Digital Signatures as the signature type.

b. Work with DocuSign to implement two-factor authentication, which is mandatory, in order to comply with Adobe Approved Trust List requirements (where two-factor authentication is required for all users accessing a server-held signing key). You may also leverage DocuSign Single Sign-On (SSO) if you are already using two-factor authentication in your enterprise.

2. Sign up with GlobalSign for a Digital Signing Service (DSS) account.

a. First, determine which signing pack you need. Your account manager will help you select the appropriate signing pack based on your business needs, including identity of signer(s) and signature volume.

b. Next, you will undergo a vetting process where GlobalSign will verify the identity of your organization. This information is included in all certificates tied to your account.

c. Finally, you will need to provide your DocuSign API Account ID to GlobalSign. This ID will be used to link your DocuSign account to your DSS Account.

Please Note: Only Authorized users, who belong to your organization, may use GlobalSign Digital Signatures.

3. Once your DSS account set-up is finalized, users will be able to select GlobalSign digital signatures as the signature type and sign with certificates from your DSS account in DocuSign.

Add Recipients to the Envelope

As the sender, you automatically receive a copy of the completed envelope.

☐ Set signing order

Email * mohit.kumar@globalsign.com

Select signature type

- DS Electronic
- DS Electronic
- DS Express
- GlobalSign - Digital Signing Service (DSS)

Message to All Recipients

Email Subject: Please DocuSign: Test_DSS.pdf

Characters remaining: 71

Advanced Options | Edit

- Recipients can change signing responsibility
- Incomplete envelopes expire days after send date
- Recipients are warned days before request expires
- Senders can use either quick send or advanced edit

4. Start signing! The resulting digital signatures will reflect the authenticated individual signer's identity, your company identity as verified by GlobalSign, and a trusted timestamp to validate the date and time of signing.

Required - Signature Applied
